

MISSION

The mission of Walther Engineering and Manufacturing Company, Inc. is to design, test, manufacture and market wheel-end products for the heavy duty truck market employing sound business planning and using advanced engineering and manufacturing techniques.

The Walthers experienced over 80 years of manufacturing in the heavy truck industry. When George Walther, Sr. cast the first steel wheels for trucks, steel was a dramatic improvement over the existing wood wheels. Over the years he, his children and their children have innovated wheel designs, brake drum designs, hub designs and have initiated hundreds of wheel-end related patents.

At Walther EMC, the goal is to produce the highest value product for our customer. With hundreds of man years of experience in the manufacturing of heavy truck and trailer wheel-end components, Walther EMC understands the technologies available. With clean sheets of paper, we set the criteria. We evaluate and select manufacturing processes that optimize the product's function and cost competitiveness. The outcome is the best value product available.

The true magic in manufacturing is selecting the best technologies for efficient production of the product. By selecting manufacturing processes that are consistent with product design parameters, we enhance product features and efficiently produce the product. Most importantly, product quality is assured. At Walther EMC, application of technology simply means better products at lower costs.

For your next tractor or trailer purchase, specify the Dura-Light Hub[®]. It is the lightest, most accurate and durable hub available at the most competitive price.

We're making all the Hub, Bub.

Walther EMC

Walther Engineering and Manufacturing Company, Inc.

The Hub of the future, from Walther EMC today.

► Dura-Light Hubs as strong as steel forgings, as light as aluminum, at a much Lower Cost.

The future has arrived with computer designed and manufactured tractor / trailer hubs. At Walther EMC, we have applied our vast knowledge of wheel-end products and over 80 years experience in the heavy duty truck market to produce the most advanced wheel hubs in the industry.

Dura-Light Hubs[®] are the result of decades of engineering and manufacturing experience. Dura-Light Hubs[®] are as strong and durable as steel forgings, yet as light as aluminum hubs.

The Dura-Light Hub's[®] advantage is that it is the most economical wheel-end means to reduce weight on your vehicle. Pound per pound, it is a better value than aluminum hubs, light weight brake drums or aluminum wheels. Put it on your vehicle and you have the lightest and the most durable hubs available. Furthermore, Walther EMC backs its hubs with a "Life of the Vehicle" warranty.

Walther EMC Dura-Light Hubs[®] are made of austempered iron, an extremely strong and durable material that exhibits the strength of heat-treated steel forgings but is more economical to produce. Since 1972, this material has been used for crankshafts, ring and pinion gears, connecting rods, truck suspension/steering components and for anything where strength and durability are important.

Dura-Light Hubs[®] are precision machined to provide a new standard of excellence to the trucking industry. The results are near perfect bearing cup alignment which maximizes bearing life and provides the truest mountings for the wheel systems of today and tomorrow.

The result of these efforts is the most durable and maintenance friendly hub available. And as if that's not enough, the Dura-Light Hub[®] is the most economical wheel-end means to lose weight on your tractor or trailer.

Now you know who's making all the Hub-Bub, and why. But if you still need to know more, call us and start saving today with Dura-Light Hubs[®].
